FURTHER INVESTIGATION OF

M&B 693

(DAGENAN)*

HAS SHOWN ITS VALUE IN

GONORRHŒA

Clinical trials in male cases of gonorrhœa have shown that there is a rapid response to M & B 693, the gonococci disappearing and symptoms clearing up with remarkable celerity.

Where early adequate treatment is given complications are infrequent and relapses rare.

The individual tolerance of patients varies, but given in appropriate amounts the drug is relatively non-toxic in effective dosage.

There are indications that M & B 693 is equally satisfactory in the treatment of complications of male gonorrhœa, gonococcal infections of women and young girls, and ophthalmia neonatorum.

M & B 693 *is obtainable in the following packs:—*
Containers of 25 tablets at 7/6, 100 at 28/-, and in larger packages for clinics. Subject to professional discount.

A descriptive booklet will be sent on request.
