Renal Denervation  
Outcomes Form

Instructions:  
Only enter data for the first measure that you are able to for each row.

Please fill out on form for each outcome.

Table 2. Mean difference from other intervention group measures of outcome (between-group difference). When filling out this table, please note that the point estimate should reflect this formula: (Final - Baseline for the intervention group) - (Final - Baseline for the reference group). You do not need to calculate this.

| Intervention group (Please be consistent with the labeling in the intervention form) | N for analysis   | Point estimate (please specify negative/positive sign)  | Measure of variability  | 95% CI or IQR   | p-value (Record exact p-value)                                       | Indicate reference group |
