SIMULTANEOUS DETERMINATIONS AND IDENTIFICATIONS

SEPTI-CHEK™
(Blood Culture/Subculture System)
The Dual Advantage

Gives the microbiologist a self-contained blood culture/subculture system.
SEPTI-CHEK combines blood culture and plated media techniques to help prevent contamination. Our closed system gives your laboratory a better, more controlled method of subculturing.

You get simultaneous qualitative determinations and preliminary identifications.
Immediately after subculturing, SEPTI-CHEK helps you create a simultaneous evaluation of patient samples. You’ll observe changes in our broth and get the advantages of differentiation and selectivity on our slide.

Our blood culture/subculture system assures abundant growth.
The slide contains Chocolate, MacConkey and Malt media to support many clinically significant pathogens.

As high as 76% of positives identified in 18 hours* with this non-isotopic system.
You’ll get faster results to help patients get the care they need as quickly as possible. Evaluations at independent laboratories have shown that SEPTI-CHEK can produce 76% of positives in only 18 hours. This far exceeds automated, radiisotopic and other manual systems.

SEPTI-CHEK helps you save time, labor, and expenses in five easy steps.
You’ll save time and labor involved in transferring blood cultures to plates. SEPTI-CHEK eliminates most of the equipment normally used for the subculturing process. Just introduce the specimen, assemble bottle and slide system, tilt and turn, and incubate. Samples can be taken from the slide by withdrawing it from the chamber.

*You can get results as early as two days sooner than other systems. MURRAY FR et al., CLINICAL LABORATORY COMPARISON OF A SLIDE BLOOD CULTURE SYSTEM WITH A CONVENTIONAL BROTH SYSTEM. Journal of Clinical Microbiology. Sept 1982 Vol. 16 No. 3 pp 529-533

...the dual advantage in a non-isotopic blood culture system.

Manual of Methods for General Bacteriology

EDITOR-IN-CHIEF: Philipp Gerhardt
SECTION EDITORS: Ralph N. Costilow
Noel R. Krieg
R. G. E. Murray
Eugene W. Nester
G. Briggs Phillips
Willis A. Wood

Published and distributed by:

ASM
American Society for Microbiology
1913 I Street, NW
Washington, DC 20006

This Manual covers all the taxa of bacteria, and its approach is generalized for both pure and applied bacteriology. Aimed at senior undergraduate and beginning graduate science majors, at teachers and researchers, the Manual provides practical descriptions of laboratory procedures that are known to be reliable and that are in frequent use. It is an invaluable tool for all involved in bacteriology in the laboratory setting.

The book comprises six sections, each of which is self-contained, with its own table of contents to help the reader find specific methods as easily as possible. The contents are listed below.

METHODOLOGY FOR GENERAL BACTERIOLOGY

GROWTH—Biophysical Factors in Growth—Biochemical Factors in Growth—Enrichment and Isolation—Solid Culture—Liquid Culture—Growth Measurement—Preservation

GENETICS—Gene Mutation—Gene Transfer—Plasmids

METABOLISM—Physical Methods—Chemical Composition—Enzymatic Activity—Permeability and Transport

SYSTEMATICS—General Characterization—Numerical Taxonomy—Genetic Characterization

LABORATORY SAFETY—Sterilization—Containment and Disinfection

ADDENDUM—Diluents and Biomass Measurement

INTRODUCING
CHEMSTRIP™ LN

The first test strip specifically designed
to rapidly screen for symptomatic and
asymptomatic bacteriuria

Leukocyte Esterase + Nitrite =
High Predictive Value
- Both tests positive: 74% predictive of
  bacteriuria and the need for culture
even without microscopic pyuria
  or clinical suspicion of infection.
- Both tests negative: 97% predictive
  in ruling out significant bacteriuria

Use it to:
- Reduce the number of routine
cultures.
- Improve patient care by identifying
  specimens that may require culture
  even when there is no clinical
  suspicion of infection.
- Monitor antibiotic therapy.
- Monitor patients with a history of
  recurring UTI.

The only test strip specific for
leukocyte esterase and nitrite
Fast, easy, accurate...
a simple dip-and-read,
one-minute test strip

MEDICAL MYCOLOGY: The Pathogenic Fungi and The Pathogenic Actinomycetes
2nd Edition
This reference for historical and current information is also the leading textbook in medical mycology. It is an in-depth study of the diseases caused by fungi and actinomycetes, emphasizing clinical and pathological manifestations along with treatment. Taxonomy has been integrated throughout; new terms and drugs are included.
By John W. Hardin, MT, Assoc. Prof. of Medicine, The Peter Bent Brigham Hospital, Harvard Med. Sch., Boston, Mass., 508 pp., 530 illus. 1982. $35.00. #75176.

Braude
MEDICAL MICROBIOLOGY AND INFECTIOUS DISEASES
Experts from all over the world contribute their knowledge to this text. Reference. Starting with basic microbiology, the reader will find discussions on the organism, the diseases and its manifestations, diagnosis, and treatment. Coverage also highlights immunology, epidemiology, antimicrobial therapy.
By Abraham I. Braude, M.D., Ph.D., Prof. of Medicine and Pathology, Univ. of California, San Diego, 1,595 pp., 1,239 illus. 1981. $37.50. #72942. A volume of the INTERNATIONAL TEXTBOOK OF MEDICINE. General Editors: A.H. Sandy, Lloyd H. Smith, Jr., and James B. Wyngaarden.

Treagane & Pulliam
MEDICAL MICROBIOLOGY LABORATORY PROCEDURES
The perfect reference for lab work! Covering 95% of the procedures performed in the microbiology lab, this handy manual aids in the identification of bacteria, fungi, and parasites. You'll appreciate its clean, systematic organization. Study questions and references end each chapter.
By Larry Treagane, Ph.D., Dept. of Biology, Hartley Science Center, Univ. of San Francisco, and Lloyd Pulliam, Ph.D., Same, 312 pp., illus. 1982. $18.95. #80989.

Remington & Klein
INFECTIOUS DISEASES OF THE FETUS AND NEWBORN
INFANT 2nd Edition
Complete reference virtually every infection that can affect the fetus and newborn, such as herpetic, chlamydial, group B streptococcal, and herpes simplex virus. Immunocompromised patients are included. Each chapter is a summation of a single disease entity.
Edited and with contributions by Jack S. Remington, M.D., Prof. of Medicine, Div. of Infectious Diseases, Stanford Univ. School of Medicine, and James O. Klein, M.D., Prof. of Pediatrics, Boston Univ. School of Medicine. Assisted by Dept. of Pediatrics, Boston City Hospital. About 1,500 pp., 112 illus. June 1982. About $85.00. #75468-2.

Altman & Schwartz
MALIGNANT DISEASES OF INFANCY, CHILDHOOD AND ADOLESCENCE
2nd Edition
A complete overview of pediatric tumor diseases, from solid tumors to leukemias. There is new information on nutrition, and a chapter on the continuing problems of children who have gone through a cancer crisis is particularly helpful. Coverage includes epidemiology, diagnosis, chemotherapy, radiation therapy, complications, tumor morphology, tumor immunology, and oncologic emergencies.
By Arnold J. Altman, M.D., Prof. of Pediatrics and Head, Div. of Pediatric Hematology and Oncology, Univ. of Colorado Health Center, Denver; and Allen D. Schwartz, M.D., Prof. of Pediatrics and Head, Div. of Pediatric Hematology and Oncology, Univ. of Colorado School of Medicine, Baltimore. 605 pp., 242 illus. Jan. 1983. $68.00. #12513-3.

CLINICS IN LABORATORY MEDICINE
Here at last is a comprehensive series exclusively for the lab medicine professional. Each issue of this illustrated, hardbound periodical features first-hand reports on new developments, expert, practice-applicable data, fresh perspectives on current problems and controversies, and references to recent literature on every topic covered.

W.B. Saunders
"Du Pont's ISOLATOR 7.5
more than half our
gives us discrete colonies on positives within 24 hours."

Robert Kascht, M.D., Director of Laboratories, Waukesha Memorial Hospital, Wisconsin

These results help physicians make earlier diagnosis and begin treatment sooner.

“DuPont ISOLATOR 7.5 microbial tubes enable us to isolate colonies on more than half of all our positive blood cultures within 24 hours of blood collection,” says Dr. Kascht. “This is a significant benefit to the patient: more rapid microbial isolation and identification mean that specific antibiotic therapy for the patient begins sooner.”

**Saves lab time**

“Because ISOLATOR 7.5 eliminates the initial 24-hour incubation period required for broth bottles, our isolation and identification process is considerably accelerated, saving valuable laboratory time,” says Charles W. Dega, M.S., A.S.M., Chief Microbiologist.

“We use a computerized system for placing blood culture orders from anywhere in the hospital and reporting these results from the lab. ISOLATOR 7.5 has cut in half the number of computer entries required for blood cultures. With ISOLATOR 7.5, aerobic and anaerobic cultures are run routinely, and are not ordered separately as with the two-bottle broth system. Now, our physician staff needs only one printout for either preliminary or final blood culture results,” he said.

“ISOLATOR 7.5 has proved particularly effective in detecting *Escherichia coli*, *Staphylococcus aureus*, *Streptococcus pneumoniae* and polymicrobial infections. All three shifts of our microbiology lab find ISOLATOR 7.5 convenient and easy to use. Our contamination rate, following recommended techniques, is only 1 to 2%;” concluded Mr. Dega.

**Faster to pure isolate**

The ISOLATOR 7.5 is a single unique tube containing both lysing and inert cushioning agents. A blood sample is drawn directly into the tube, where RBCs are lysed. The sample is then centrifuged, which concentrates the microorganisms from the blood onto the cushioning fluid. The microbial concentrate is aseptically removed and inoculated directly onto agar media. Direct plating dilutes any antibiotics present in the blood, to provide a greater degree of survival for microorganisms.

Because it employs a variety of culture plates under aerobic and anaerobic conditions, ISOLATOR 7.5 reveals a greater number of pathogens, including yeast and polymicrobial infections that have previously gone undetected. ISOLATOR 7.5 increases true positives up to 20% and provides pure isolates 12 to 24 hours ahead of methods using conventional blood culture bottles.”

ISOLATOR 7.5 requires little or no capital investment. For more information about ISOLATOR 7.5, write to DuPont Clinical Systems, Room X39644, Wilmington, DE 19898, or call toll free (800) 441-9804. In Canada, call (416) 498-9380.

*Individual hospital results may vary as a function of patient population and type of blood culture bottles used.*

Clinical Systems

designed to advance with medicine
In the diagnosis of bacteremia in patients receiving antimicrobial therapy...

STUDY AFTER STUDY SHOWS THAT THIS PRODUCT UNCOVERS SIGNIFICANT POSITIVES YOU WOULD HAVE MISSED!
Study after study shows that the ARD is an effective adjunct in the diagnosis of bacteremia in patients receiving antimicrobial therapy.

Without exception, each of these studies showed that the ARD (Antimicrobial Removal Device) made it possible for additional positives to be found... positives which were not detected by conventional techniques alone.

The control methods, experiment designs, and patient types varied. Yet, regardless of the study procedure, use of the ARD increased the recovery of positives.

Your Marion Scientific representative can supply you with details of the studies cited and the names of ARD users near you. Talk with them. Test ARD yourself. We think you'll join the 1000 hospitals who have decided that the gravity of bacteremia demands the use of one of the most effective tools available... the ARD.

More than 1000 hospitals keep ARD on call.

STUDIES CITED

The latest volume in ASM's annual Microbiology series:

Microbiology-

1983

Editor:
David Schlessinger

This volume covers a variety of topics:

I. Termination, Antitermination, and Processing of Bacterial mRNA
II. Genetic Control of DNA Replication of Phages and Their Hosts
III. Impact of Genetics on the Systematics of Microorganisms
IV. Metabolism of C, Compounds
V. Developmental Biology of Bacteria
VI. Mycology
VII. Infectious Diseases
   A. Iron and Trace Metals: Transport, Metabolism, and Disease
   B. Obligate Intracellular Parasitism
VIII. Short Reviews

Researchers in these areas, departmental and university libraries, and graduate students with a particular interest in any of these topics will find this volume useful.

Also Available: Previous volumes in the Microbiology series are still available. The more recent are Microbiology—1982, Microbiology—1981, and Microbiology—1980, but the series goes back to Microbiology—1974. Volumes prior to the 1983 volume are priced at $25.00 for nonmembers, $15.00 for ASM members. Microbiology—1983 is priced at $27.00 for nonmembers, $17.00 for ASM members. It contains 412 pages and is clothbound. Publication date: May 1983. ISBN: 0-914826-53-0.

"WE’RE TOUGH AS NAILS BECAUSE WE CARE ABOUT THE AIR YOU BREATHE."

Every Labconco Laminar Flow Cabinet we manufacture must pass three rigorous inspections before we sign our names and give you the written results.

When you deal with potentially hazardous materials, you want peace of mind about the air you breathe.

That’s why, at Labconco, we’re so conscientious about inspecting our Laminar Flow Biohazard Safety Cabinets. Not just every tenth cabinet off the assembly line. Not every third. But every cabinet we make, we submit to exhaustive testing. And we’re very tough about it.

The assembler spends nearly half a day running six demanding tests comprising dozens of readings. There are no compromises. Once all tests are passed, he signs his name to a sticker on the cabinet. And the department manager signs that it has passed rigid manufacturing standards.

Then the Labconco quality control engineer runs the same demanding tests a second time. And when he signs the cabinet, it is ready to be released.

But we’re still not satisfied. An independent technician engaged by Labconco will inspect, test your cabinet for the third time, and certify it free of charge once it’s installed in your laboratory.

Because our inspectors are tough as nails, we offer the longest warranty available. For two years we will provide free service parts and labor as well as emergency service calls.

Contact Labconco for more information. Together with your laboratory dealer we will be happy to discuss your needs.

Call toll-free 800-821-5506 for your free color catalog by return mail!

In Missouri, Hawaii, Alaska, and Canada, call 816-333-8811. Or fill out the coupon below.

Pasteur's controlled studies of wine shattered the theory of spontaneous generation, proving that invasion by microorganisms caused both fermentation and putrefaction, and that growth of pathogenic organisms could be prevented.

Extending this basic principle of infectious disease, he conquered a silkworm epidemic, chicken cholera, sheep anthrax and, finally, human rabies. It was his diligent application of the scientific method to such diverse achievements that made Pasteur so remarkable.

What do French wine, silk and chickens have to do with microbiology today?

Today, application of the scientific method to diverse problems is an established function of the microbiology laboratory. General Diagnostics is proud to support this fine Pasteurian tradition by supplying products that permit a wide range of testing flexibility:

**AUTOBAC™:**
The constantly evolving automated microbiology system

**MICRO-ID®:**
The accurate, rapid identification system for Enterobacteriaceae

**MANUAL DISK SYSTEM***:
The space-saver for organized susceptibility testing

**E-VAC:**
The total blood culture system offering a wide choice of media

**FLUORETEC™** Fluorescent Antibody Test Kits for identification of *Bacteroides fragilis* and *B. melaninogenicus*

**BACITRACIN** and OPTOCHIN Disks for differentiation of Group A beta-hemolytic streptococci and pneumococci

**PATHOTEC®** Cytochrome Oxidase Test Strips

**PLU-STRIP** Kits for detection and characterization of *Haemophilus* species

**ANISOMYCIN**: An antifungal agent for culture media

We weren't around to help Pasteur... so we're making up for lost time!

CULTURETTE is not a generic word. In all the world, only five culture collection systems are entitled to use it: Cuturette, Culturette II, Viral Culturette, Anaerobic Culturette and Mini-Tip Culturette. All are manufactured only by Marion Scientific.*

Others have attempted to imitate the unique, patented Culturette product and package. We've been flattered. But you, obviously, haven't been fooled. The majority of hospitals throughout the USA choose to use the real thing.*" We intend to give them every reason to continue to do so.

If you'd like to hear some of these reasons, contact your authorized Marion Scientific distributor, or contact Marion Scientific at the address listed below.

Second edition—

MANUAL OF CLINICAL IMMUNOLOGY

Editors: Noel R. Rose and Herman Friedman

MC-12 is completely unsurpassed as a source of information for laboratory immunology, dealing as it does with the applications of immunology to the detection and analysis of a wide variety of diseases, including, but not limited to, those induced by microorganisms. The best methods for conducting specific immunological tests are painstakingly and thoroughly detailed. The clinical interpretations of each procedure are discussed, as are pitfalls and problems that may be encountered in carrying out specific laboratory procedures.

Specifically, the second edition differs from the first in that a new initial section has been added dealing with general methods for precipitin reactions, cytolytic reactions, neutralization, immunofluorescence, enzyme-linked techniques, and lymphocyte characterization. The second section includes procedures for detection of immunogenetic markers on immunoglobulins. A new section dealing with complement and immune complexes has been added. The section on cellular components of immunological responses has been rewritten and expanded to include many of the newer methodologies being developed for cellular immune reactions. In addition, all the work embodied in this definitive book reflects the accelerated development of new and improved methods for clinical laboratory immunology since 1976, when the first, widely acclaimed edition was published.

Ordering information:

MANUAL OF CLINICAL IMMUNOLOGY,
2nd Edition,
is available in two bindings: Clothbound
(ISBN: 0-914826-25-5);

1983 Student Membership —
American Society for Microbiology
1913 I St., NW, Washington, DC 20006

Any regularly matriculated student majoring in microbiology or a related field is eligible for election as a Student Member. Student Members have all privileges of membership except the right to vote and hold office in the Society. Student Members receive the monthly *ASM News* and are entitled to subscribe to the Society's journals at member rates.

Memberships are initiated and renewed in January of each year. Unless there are directions to the contrary, membership nominations received prior to November 1 will be credited to the current year, and back issues of the selected publications for the current year will be furnished if available. Nominations received after November 1 will become effective the following January.

RATES ARE FOR 1983 ONLY

JCM
Please enclose payment with application.

Prices are listed in U.S. dollars. Due to currency exchange difficulties and cost, foreign applicants in countries except Canada must remit in U.S. dollars by check or draft payable to ASM through a U.S. bank. Applicants from Canada may use checks drawn on Canadian banks, but remittance must be made in U.S. dollars.
The stain in the main goes neatly on the plane...

with Bacto-Gram Stain Set.

Stains come in 250 ml. plastic bottles, ready to use. The special snorkel-top plastic cap supplied with each bottle puts the stain right where you want it, on the slide, not on hands or lab coat. The base of the set serves as a rack for the stain bottles. When a bottle is empty, simply discard and replace it from the handy economical 250 ml. 6-pack. The replacement eliminates accidental spillage while pouring from one bottle to another.

No time-consuming and messy dilution or preparation necessary. No weighing, filtering, or costly waste of material. Stains will not precipitate. All reagents are carefully standardized; Difco quality assures consistent, reproducible, accurate results every time. End messy stains in your laboratory. Write for literature 3328. P.O. Box 1058A, Detroit, Michigan 48232.

CUMITECH 16
Laboratory Diagnosis of the Mycobacterioses
March 1983

By Herbert M. Sommers and J. Kenneth McClatchy
Coordinating Editor: Josephine A. Morello
Chairman, Editorial Board, ASM Cumitechs:
John A. Washington II

The purpose of this Cumitech is to provide laboratory personnel who have limited experience in mycobacteriology with a set of general principles that will be useful for the isolation, identification, and susceptibility testing of mycobacteria.

With the closing of tuberculosis sanatoriums and their specialized laboratories, many hospital clinical microbiology laboratories have had to assume the primary responsibility for providing diagnostic services to patients with tuberculosis. This new Cumitech will be helpful in laboratories where identification of mycobacteria and diagnosis of tuberculosis are performed.

ORDERING INFORMATION:
Cumitechs cost $4.50 each, prepaid. Standing orders are billed annually. Quantity discounts: 11-50 of the same Cumitech @ $3.50 each; 51-250 @ $2.25; 251-1,000 @ $1.50; 1,001 and over @ $1.00. Payment must accompany all orders (member and nonmember) for single copies of Cumitechs. Prices are subject to change without notice. Also available: Three ring vinyl binder for ASM Cumitechs: $7.00.
Sceptor™

Accuracy
where you need it most

In nearly fifty years of service to microbiologists, BBL® has learned the true meaning of accuracy. Accuracy means more than mere test results. It means meeting the clinical laboratory needs of microbiologists, epidemiologists and physicians as well as satisfying the financial needs of Hospital and Laboratory Administrators.

The SCEPTOR System has been designed to meet these varied needs by offering unmatched accuracy in a modular system that can bring convenience and efficiency to any size hospital laboratory.

☐ **Accuracy** — SCEPTOR results have been shown to be in agreement 97.2% of the time with reference methodologies.\(^{(1,2)}\)

☐ **Full-line capability** — SCEPTOR Test Panels make it possible to do simultaneous MIC/ID testing on gram negatives, gram positives*, an aerobes* and yeasts**; over 90% of the isolates in your lab.

☐ **Resistance to obsolescence** — The modular design allows the SCEPTOR System to accommodate technological advances while maintaining the basic integrity of the system.

☐ **Cost-effectiveness** — SCEPTOR provides cost efficiencies that offer payback on your investment within one or two years.

For complete information on the SCEPTOR System, or to arrange a demonstration in your laboratory, call TOLL FREE (800) 638-7918 or write:

“Before we bought an automated microbiology system, we did some tough comparison shopping.”

James Remsing
Supervisor of Microbiology
St. Joseph's Hospital
Fort Wayne, Indiana

STRAIGHT TALK: from Vitek

We did a careful in-house comparative study of the two systems that offered the features we needed—the Vitek AMS System and one from another leading manufacturer.

“From a medical viewpoint, the Vitek system was more flexible and responsive. In urine screening, it provides preliminary identification and colony counts in hours, with excellent sensitivity. It also allows interim status checks during analysis. The other system we evaluated provides only positive or negative results. The Vitek system also allowed for expansion in susceptibility testing—new antibiotics can be added to existing cards. Our medical staff found the Vitek printed report more legible and more understandable.

“Vitek was also technically superior. The competitive system required many of the same steps used in manual testing. Vitek is totally automated. The simplicity of the AMS system made training different shifts much easier.

Both systems required minimal quality control and preventive maintenance.

“We analyzed both systems from a budgetary point of view, considering original investment, payback period, and the test volume and costs of our institution. Both systems had similar capabilities, but the Vitek system was considerably less expensive.”

We invite you to compare the AMS AutoMicrobic System side-by-side with your existing procedure, or with any other system. Measure its performance using your samples and your personnel—there’s no substitute for hands-on experience. For additional information, or a demonstration, call 1-800-325-1977.
