

Figure S1. Aggregate gut degradation score of three larvae at 0, 5, 20 and 24 hours post-infection with isolate LT2, S03099-12, S03659-10 or L00776-10. For each isolate the extent of degeneration of the gut structure in the larvae was scored as 0 (no change/normal), 1 (moderate) or 2 (severe) and plotted as the total score obtained from the three larvae at each time-point.
