Supplementary Table 1. Common adjuvant chemotherapy regimens for epithelial ovarian cancer.

**Early Stage Epithelial Ovarian Cancer**
Paclitaxel/Carboplatin every 21 days for 3-6 cycles 1,2

**Neoadjuvant Chemotherapy for Advanced Epithelial Ovarian Cancer**
A. Paclitaxel/Carboplatin every 21 days for 3 cycles 3,4
B. Interval Debulking Surgery +/- HIPEC with cisplatin 3,5
C. Paclitaxel/Carboplatin every 21 days for 3 cycles 3,4

**Adjuvant Chemotherapy following Optimal Primary Debulking Surgery (R≤1cm)**
A. IV/IP Paclitaxel/Cisplatin for 6 cycles 6
B. IV Paclitaxel/Carboplatin for 6 cycles 7
C. IV Docetaxol/Carboplatin for 6 cycles 8
D. IV Paclitaxel/Carboplatin/Bevacizumab for 6 cycles followed by maintenance Bevacizumab for 12-17 additional cycles 9,10

**Adjuvant Chemotherapy following Suboptimal Primary Debulking Surgery (R>1cm)**
A. IV Paclitaxel/Carboplatin for 6 cycles 6
B. IV Paclitaxel/Carboplatin/Bevacizumab for 6 cycles followed by maintenance Bevacizumab 9
C. IV Weekly Paclitaxel/IV Carboplatin for 6 cycles 11
